

Risk and Management of Palmer Amaranth in Sunflower

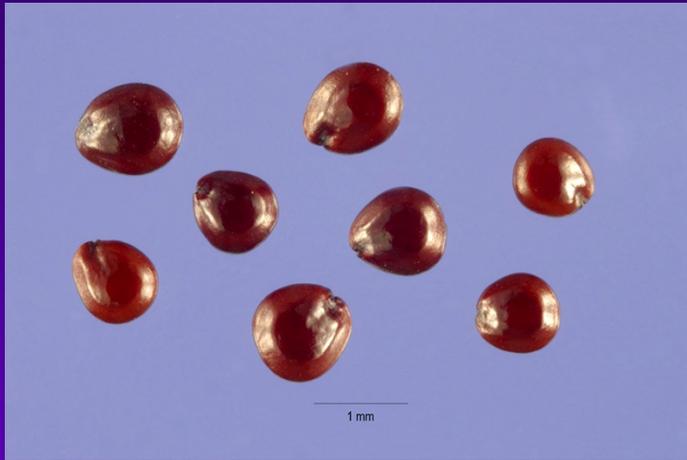

Phillip W. Stahlman and Seshadri S. Reddy
Agricultural Research Center-Hays
Kansas State University

Palmer amaranth Distribution carelessweed

Palmer Amaranth Biology

- *Amaranthus palmeri*
- Pigweed family
- Small reddish-brown seeds
- Seedlings emerge May-July

Palmer Amaranth Biology

- Dense and compact smooth leaves
- Petioles longer than leaves
- Deep taproot w/lateral roots

Terminal
inflorescence

Reddish-green stems
with sharp bracts

Diecious species; cross
ensures genetic diversity

Palmer Amaranth Biology

Converts CO₂ into sugars via photosynthesis more efficiently than most crops.

Rapid growth even under hot and dry conditions.

Under ideal growing conditions, capable of growing several inches per day.

Growth of Palmer amaranth over 52 hours.

Sosnoskie et al. 2011. The Biology and Ecology of Palmer Amaranth: Implications for Control. University of Georgia

Crop Competition

- Palmer amaranth competition with corn was affected more by time of emergence than weed density at Garden City, KS.
- 8-10 plants m² reduced soybean yields 79% in KS and 68% in AR.
- In KS, >50% yield loss in sunflower at moderate Palmer amaranth densities.

Suspected Glyphosate-resistant Palmer amaranth in Kansas

Palmer amaranth from Cowley County, Kansas

Cowley Co.
Susceptible

0

0.75

1.5

3.0

Glyphosate rate (lb ae/acre)

Many plants survived 1X and 2X rates of glyphosate; some plants survived 4X.

Kansas Sunflower Commission, National Sunflower Association, and Industry Funded Research

- Evaluate experimental compounds and herbicides labeled for use in other crops that might have potential for use in sunflower.
- Emphasis on Palmer amaranth and kochia.

Summary

- Single active ingredient herbicides generally have not been as effective as herbicide mixtures.
- Broadaxe (sulfentrazone & S-metolachlor) has provided good-excellent weed control; weak on puncturevine.
- Zidua (pyroxasulfone) is promising; use rate may be limited by cost. Need to evaluate early preplant applications.

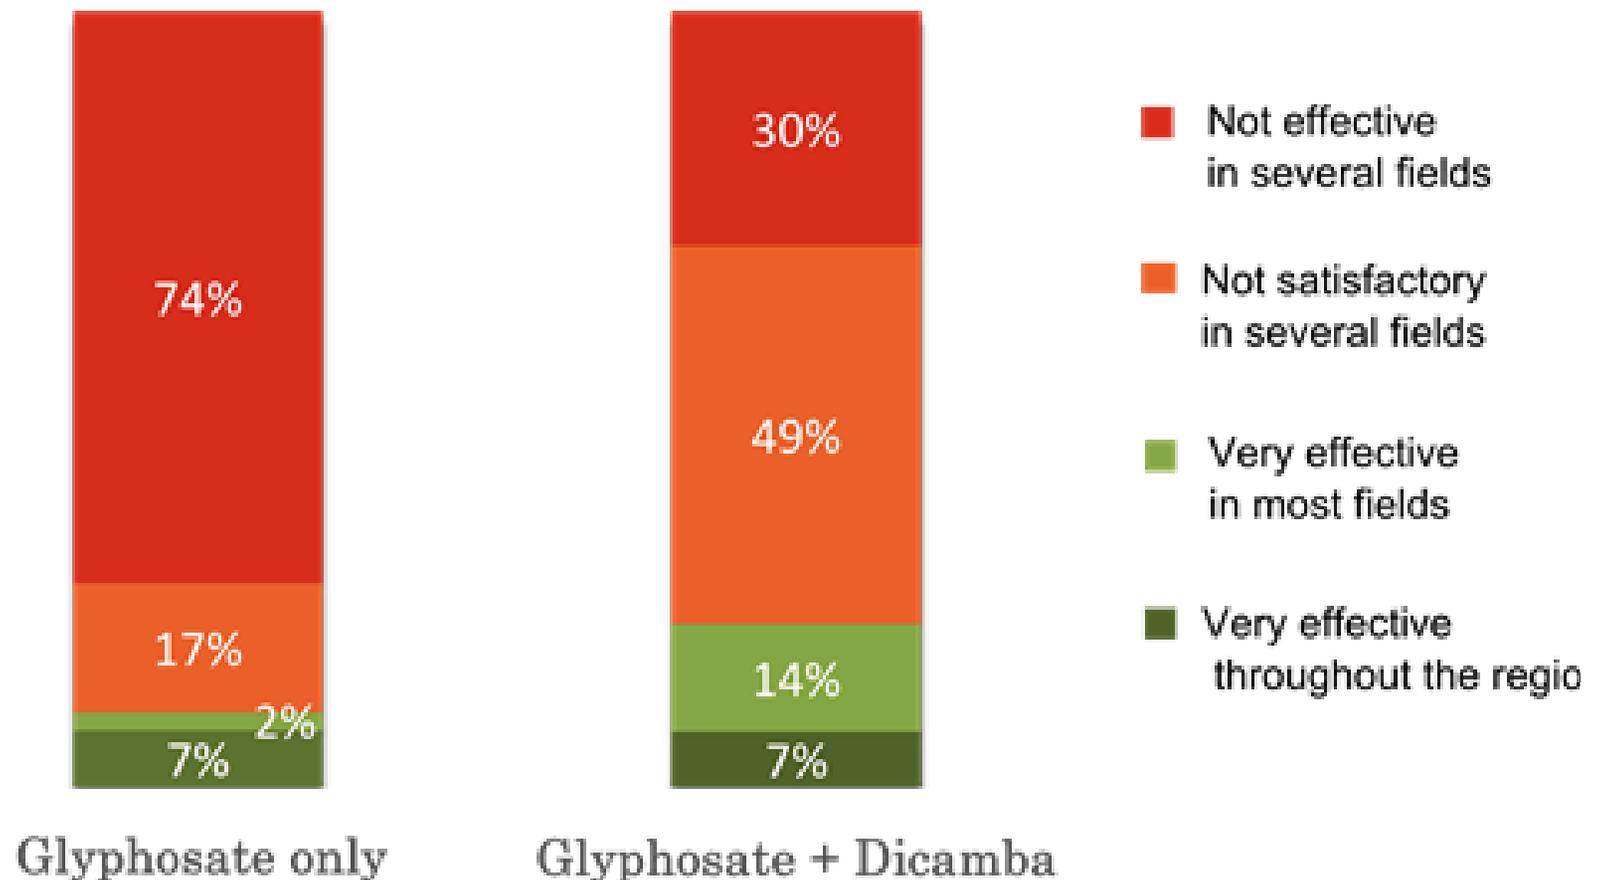

Increasing difficulty of controlling kochia (in fallow) and indication of widespread presence of GR kochia in western Kansas

Kochia infestation and state of glyphosate-resistant (GR) kochia in western Kansas
